

Direct Drive

BENEFITS

- It is quieter to operate with internal hopper liners and hydraulic cylinder actuated ratchets.
- Bolt-on hitch.
- More powerful drives capable of 23200 Nm
- Direct drive creates even smoother action.
- Integrated braking system.
- More steel where it is needed and less where it is not.
- No service or greasing daily
- Service period is 1500 hours (oil change in final drive).
- No chains to service.
- Stainless steel bearings requiring no service.
- The machine is lighter.
- The hitch is closer to the cutting edge, making it more compact to operate.

The final drive motor is attached directly to the screening bucket, eliminating chains, sprockets and internal moving parts.
